THE GUYS
WHO CUT THE PIZZA

ASSET SPLIT

Asset Split is an Ethereum based asset generating platform with focus on smart-contract-generating smart contracts.

The platform is made for both crypto enthusiasts and beginners!

Our mission is the simplification of smart contract standards to allow any John Smith creating a smart contract, fitting for his needs.

All generated contracts become part of the Asset Split Network (ASN), building a strong and solid community. Low gas fees for „smart contracts generated by smart contracts" is an advantage that professionals do appreciate.

ETHEREUM ASSET SPLIT TOKEN (EAST)

EAST is an Ethereum ERC-20 token, used as the primary payment method for services offered by the ASN and is building the backbone of every upcoming service contract.

Total supply: 150,000 EAST

INITIAL TOKEN SALE

100% of the total EAST volume is initially owned by the ASN token sale contract.

Price: 1 Ether = 100 EAST

EAST PROFIT SHARES

All existing and upcoming ASN service contracts are owned by an ASN share manager contract. From this ASN share manager, investors are allowed to sign ASN shares. Each ASN share is an own smart contract, holding investors collateral of 1,000 EAST and is owned by the signer. All ASN share contracts have included functions to receive and withdraw payments in EAST & Ether.

The EAST sale contract is owned by the ASN share manager contract, providing Ether from EAST token sales to ASN shareholders. One share is equal to 1% platform turnover.

EAST SUB SHARES

Owners of a full share do have the option to sell parts of their full share within the ASN. All partial shareowners are becoming part of the locked tokens and of every further payment withdrawn from this share. This includes later created sub share parts as well.

UPCOMING SERVICES

Automated smart contract generation for ERC-20 tokens,
token sale contracts, crowdsale, share managers and duty stapler.

Personalized asset to blockchain services

Decentral (P2P) exchange
